NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Center for Computer Sciences and Technology, and the Office for Information Programs.

THE INSTITUTE FOR BASIC STANDARDS provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of a Center for Radiation Research, an Office of Measurement Services and the following divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Linac Radiation[2] — Nuclear Radiation[2] — Applied Radiation[2] — Quantum Electronics[3] — Electromagnetics[3] — Time and Frequency[3] — Laboratory Astrophysics[3] — Cryogenics[3].

THE INSTITUTE FOR MATERIALS RESEARCH conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials and the following divisions:

Analytical Chemistry—Polymers—Metallurgy—Inorganic Materials—Reactor Radiation—Physical Chemistry.

THE INSTITUTE FOR APPLIED TECHNOLOGY provides technical services to promote the use of available technology and to facilitate technological innovation in industry and Government; cooperates with public and private organizations leading to the development of technological standards (including mandatory safety standards), codes and methods of test; and provides technical advice and services to Government agencies upon request. The Institute also monitors NBS engineering standards activities and provides liaison between NBS and national and international engineering standards bodies. The Institute consists of a Center for Building Technology and the following divisions and offices:

Engineering and Product Standards—Weights and Measures—Invention and Innovation—Product Evaluation Technology—Electronic Technology—Technical Analysis—Measurement Engineering—Building Standards and Code Services[4]—Housing Technology[4]—Federal Building Technology[4]—Structures, Materials and Life Safety[4]—Building Environment[4]—Technical Evaluation and Application[4]—Fire Technology.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Center consists of the following offices and divisions:

Information Processing Standards—Computer Information—Computer Services—Systems Development—Information Processing Technology.

THE OFFICE FOR INFORMATION PROGRAMS promotes optimum dissemination and accessibility of scientific information generated within NBS and other agencies of the Federal Government; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world, and directs the public information activities of the Bureau. The Office consists of the following organizational units:

Office of Standard Reference Data—Office of Technical Information and Publications—Library—Office of International Relations.

Tabulation of Voluntary Standards and Certification Programs for Consumer Products

Sophie J. Chumas

This tabulation is a revised and enlarged version of NBS Technical Note 705, "Tabulation of Voluntary National Standards, Industry Standards, International Recommendations and Certification Programs for Consumer Products," issued December 1971.

Technical Note 705 was a revision of the Draft Tabulation compiled by the American National Standards Institute and issued in April 1970. The categories and products covered in the tabulation were originally based on those listed in the Consumer Product Safety Index (CPSI) of the National Commission on Product Safety, published in July 1970. The products and categories in the current revision are based on those developed for the National Electronic Injury Surveillance System (NEISS) of the Food and Drug Administration. The NEISS listings are an expansion and revision of the CPSI. NEISS product areas were slightly altered to conform to the scope of this tabulation.

The tabulation lists over 700 product areas and over 1000 standards titles covering products found in and around the home. (The major consumer product areas not included are foods, beverages, and drugs.) The tabulation also indicates the applicable voluntary national, industrial, and international standards which deal primarily with either safety or performance or both aspects of the products listed. For some of the product areas, there are no applicable standards. Available information on certification programs and standards under development, and the Standard Industrial Classification (SIC) numbers for the products are also provided.

Key Words: Certification programs; consumer products; household products; industry standards; international recommendations; national standards; product standards; recommended practices; specifications; test methods.

1. Introduction

This tabulation is a revised and enlarged version of NBS Technical Note 705, "Tabulation of Voluntary National Standards, Industry Standards, International Recommendations and Certification Programs for Consumer Products," issued December 1971.

The original draft of the tabulation was developed by the Consumer Council of the American National Standards Institute (ANSI) in 1970. The categories and products covered in the ANSI tabulation were based on those listed in the Consumer Product Safety Index (CPSI) of the National Commission on Product Safety, issued in July 1970. In 1971, at the Consumer Council's request, the Bureau's Office of Engineering and Information Processing Standards revised the draft tabulation and issued it as NBS Technical Note 705.

The current revision of Technical Note 705 covers products and categories taken from the National Electronic Injury Surveillance System (NEISS) of the Food and Drug Administration. The NEISS listings are an expansion and revision of the CPSI. NEISS product areas were slightly altered to conform to the scope of this tabulation. The omitted product numbers of the tabulation are: 0336, 0641, 0656, 0914, 1004-1016, 1268, 1270, 1630, 1640, 1813.

Although its principal objective is to indicate existing standards and certification programs for consumer products found in and around the home, this revision includes for the first time available information on standards under development, the Standard Industrial Classification (SIC) number of the listed products, and a listing of the standards titles.

For the purpose of this tabulation the word "standards" encompasses specifications, recommended practices, analyses, and selected test methods for products or certain aspects of the products, but does not include those standards related to installation, maintenance, definitions, or parts of products.

The certification programs listed are (1) Association certification certification programs, (2) third-party certification programs or (3) self-certification programs.

Information on standards which have not yet reached the publication stage is indicated by "IP" (in process) and appears under the column "Latest Issue or Status of Standard." Tentative standards are indicated by "T" in the same column, after the date. Within the tables the numbers listed under the heading "Product Number" are those used by NEISS. The product number should always be preceded by the

letter "P" when cited in the literature (e.g., P0213, P1620). In the column headed "Responsible Organization and Standard Designation," the symbol ⊂ means that information is contained in the standard which does not relate exclusively the the product. An asterisk (*) preceding a number means that the number was assigned as a retrieval designation by Standards Information Services in the absence of an official number assigned by the issuing organization. The letters listed under "Type of Standard" are keyed as follows:

O = Other
P = Performance
S = Safety
TM = Test Method

The tabulation is expected to be of use to standards-writing organizations, Federal and State government agencies, distribution and retail groups, labor unions and trade association, consumer organizations, and individual consumers. It is hoped that the information contained in this tabulation will indicate those product areas where standards are needed, reflect possible duplication of effort by standards-writing organizations, and provide an impetus for coordination of standardization activities.

Standards Information Services will continue to keep abreast of standards development and publication, and, as sufficient changes occur to so warrant, new editions of this tabulation will be published. Users are invited to make comments or provide information which can be considered for incorporation in the next edition, so that it will more completely define the status of consumer product standards. There is a particular need for information on standards in the process of development since the only way to obtain this information is directly from the Association involved. Send comments to Standards Information Services, National Bureau of Standards, Technology Building, Room B147, Washington, D.C. 20234.

4.2. PRODUCT INDEX INCLUDING SIC NUMBERS

The applicable Standard Industrial Classification (SIC) number(s) immediately follow(s) the product entry in parentheses. There are some instances when a SIC number could not be assigned. The assignment of the SIC number(s) was based only on the first product listed in the entry and all words describing that product; for example:

Animals, toy, and dolls, mechanical, including key wind and battery operated (3944)
Bedspreads (2211, 2392)
Cleaning and Sanitizing Compounds, solvent-based (2841, 2842)
Fondue Pots and Chafing Dishes with open flame burners
Windshield Wiper Fluid (2899)

When more than one SIC number is provided, each number should be checked and identified before being used for statistical purposes since the SIC number(s) can refer to (1) different materials, (2) products made from purchased materials transferred from another establishment, (3) products made in the same establishment as the basic materials, or (4) separate parts of products. In the latter case, the numbers are separated by "and;" for example: Garage doors, with automatic door opener and closer (2431, 3442, and 3699) (2431, 3442 refer to the garage door and 3699 refers to the automatic door opener and closer).

16. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)

This tabulation is a revised and enlarged version of NBS Technical Note 705, "Tabulation of Voluntary National Standards, Industry Standards, International Recommendations and Certification Programs for Consumer Products," issued December 1971.

Technical Note 705 was a revision of the Draft Tabulation compiled by the American National Standards Institute and issued in April, 1970. The categories and products covered in the tabulation were originally based on those listed in the Consumer Product Safety Index (CPSI) of the National Commission on Product Safety, published in July 1970. The products and categories in the current revision are based on those developed for the National Electronic Injury Surveillance System (NEISS) of the Food and Drug Administration. The NEISS listings are an expansion and revision of the CPSI. NEISS product areas were slightly altered to conform to the scope of this tabulation.

The tabulation lists over 700 product areas and over 1000 standards titles covering products found in and around the home. (The major consumer product areas not included are foods, beverages, and drugs.) The tabulation also indicates the applicable voluntary national, industrial, and international standards which deal primarily with either safety or performance or both aspects of the products listed. For some of the product areas, there are no applicable standards. Available information on certification programs and standards under development, and the Standard Industrial Classification (SIC) numbers for the products are also provided.

17. KEY WORDS (Alphabetical order, separated by semicolons) Certification programs; consumer products; household products; industry standards; international recommendations; national standards; product standards; recommended practices; specifications; test methods.

JOURNAL OF RESEARCH reports National Bureau of Standards research and development in physics, mathematics, and chemistry. Comprehensive scientific papers give complete details of the work, including laboratory data, experimental procedures, and theoretical and mathematical analyses. Illustrated with photographs, drawings, and charts. Includes listings of other NBS papers as issued.

Published in two sections, available separately:

- **Physics and Chemistry (Section A)**

Papers of interest primarily to scientists working in these fields. This section covers a broad range of physical and chemical research, with major emphasis on standards of physical measurement, fundamental constants, and properties of matter. Issued six times a year. Annual subscription: Domestic, $17.00; Foreign, $21.25.

- **Mathematical Sciences (Section B)**

Studies and compilations designed mainly for the mathematician and theoretical physicist. Topics in mathematical statistics, theory of experiment design, numerical analysis, theoretical physics and chemistry, logical design and programming of computers and computer systems. Short numerical tables. Issued quarterly. Annual subscription: Domestic, $9.00; Foreign, $11.25.

TECHNICAL NEWS BULLETIN

The best single source of information concerning the Bureau's measurement, research, developmental, cooperative, and publication activities, this monthly publication is designed for the industry-oriented individual whose daily work involves intimate contact with science and technology—*for engineers, chemists, physicists, research managers, product-development managers, and company executives.* Includes listing of all NBS papers as issued.
